What is Networking? And how do I do it?

A network is the personal and professional community you build around yourself.

There's **formal** networking:

Sometimes, you force yourself (because you know it's good for you) to attend events on campus or in the community and meet people that have similar interests to you. After you connect, you should reach out to one another on [LinkedIn](#), so you can stay connected over time. Then you two are in one another's networks.

There's **informal** networking, such as:

- Classmates gathering for a Monday night study group.
- Friends going out for dinner together.
- Party-goers discussing similar interests, like travel or running marathons.
- Book club at a friend's house.

Networking does not only occur in the realm of professional, industry, and career conversations. Rather, it's a matter of forming and maintaining relationships and connections.
